Dear Metropolitan Water District:

Regarding the Cadiz Project, in which the Metropolitan Water District of Southern California and Cadiz, Inc. would store water in the Mojave Desert aquifers to be used in dry years, I have great concerns. It now appears the ground water studies are for this project may be highly flawed. Now that the USGS has provided significant new information, there should be a new or supplemental EIR done on this project.

As desert residents, many of us are concerned regarding the detrimental effects this project could have on our desert environment.
