

SUSTAINABLE VITICULTURE FORUM:
TECHNOLOGY AND WATER

01 · 09 · 2018

Shone Farm

7450 Steve Olson Lane
Forestville, Sonoma County

WHY? Sustainable winegrowing is a priority for many California vintners, particularly with regard to water management. The goal of this forum is to understand the wine industry's major sustainability challenges in water and discuss how and where innovation and technology solutions can help solve problems.

**THIS FORUM IS AN OPPORTUNITY
FOR GROWERS TO:**

- Engage in peer learning and share best practices around water sustainability
- Interact with ag-tech solution providers to explore opportunities for innovation through technology
- Converse with state agency representatives and sustainability professionals about expectations and the best ways to meet shared goals

TOPICS COVERED WILL INCLUDE:

- Scaling innovative irrigation technologies and practices (including remote sensing, precision irrigation, and water reuse)
- Improving water supply reliability while mitigating physical and regulatory water risks
- Addressing challenges and barriers to adoption of technological innovations

Presented by:

The CEO Water Mandate
